Stacey, Phil, Jose,

Thanks to Mike and his vast internet knowledge, we found the link below that shows a drop in barometric pressure in Victoria, Tx. starting at approximately 1 pm and continuing to drop till 6pm on the day of the pump test UEC provided. The pump test indicates a drop in fluid levels in all monitor wells occurred starting between 1:30 and 2:00 pm and continued until the end of the test at approximately 3:30pm.

Victoria is about 25 miles from Ander (est). This makes it less likely that a drop in the barometric pressure was the cause of the drop in the fluid levels in the monitor wells as UEC suggests.
